**AutoCAD Crack + [Mac/Win]**

3D model in AutoCAD,  
or 3D object in other  
CAD applications, is  
more accurately called a  
3D object in the context  
of the entire design

---

process rather than in the context of the drawings it was used to create.

AutoCAD is a platform for user-definable macros. These macros are completely script-based and can be written in a proprietary scripting language known as

---

AutoLISP. They are referred to as “functions”. These functions run on the AutoCAD application itself and are called through the interface. AutoCAD functions are similar to VBA functions in Microsoft Office.

---

Programming AutoCAD was originally developed using AutoLISP. The first version of AutoLISP was called MOLD, written by Colin Baxter-Reynolds and Lee Brown in the summer of 1982.

MOLD became the standard language for all

---

subsequent Autodesk versions, and is still used by some customers.

From 1994 to 2002, AutoCAD was developed with Visual LISP. This language was discontinued in 2002, but has recently been revived. AutoCAD is

---

also supported by Visual Studio.NET and Microsoft Visual Basic. These scripting languages can be used for entirely customizing AutoCAD, but also for general scripting, such as automation. AutoLISP  
AutoLISP is a

---

proprietary scripting language developed by Autodesk. It is a widely used, third-generation programming language. It is used in AutoCAD, AutoCAD LT, AutoCAD Architecture and AutoCAD Civil 3D, as well as a number of other

---

Autodesk applications.  
The main advantages of  
AutoLISP over other  
scripting languages such  
as Visual Basic, Visual  
C++, or other scripting  
languages are: The  
language is interpreted,  
not compiled. The object

documented. Full Unicode support. Scripts can be categorized as commands or functions, which are similar to VBA functions in Microsoft Office. AutoLISP is used for many purposes in AutoCAD and AutoCAD LT, including, but not

---

limited to, customizing the software. However, the main purpose is to customize the program by extending it, add new functions and change the appearance. AutoLISP commands can be categorized into these groups: Customization
