We've done hot cross buns at work every year since I worked there, but I didn't make them when I was home at work. If you're anything like me, you've probably eaten a hot cross bun in the last month. Lock and unlock annotations by freehand drawing. Annotation tools with Lock and Unlock make it easy to mark, align, and place your drawing based on freehand drawings, dimensions, and text. Revit Component Collections in Autodesk Revit Architecture Reduce the time it takes to import the design. Revit Component Collections allows you to drag and drop a Component into the component family tree. This will automatically import the relevant tag data from the Component Collection for that family and include it in the component family tree. This makes it easier to share and manage design changes. You can also perform actions such as assigning materials, dimensions, and attributes. Element Selection from Point Cloud Data Assign properties to components or objects using a new, point cloud-based element selection interface that enables you to drag and select elements based on 3D information, including color, size, and opacity. You can also find similar objects or elements and specify different properties such as color.
