Netbeans download for windows 10; Jdk netbeans 32 bits; Netbeans 7..Q: Windows Developer Mode Does the Windows Developer Mode expose information about processes running under the C:\Windows\System32\Cache folder? I'm interested in writing an application that is capable of injecting it's own DLL into System32\Cache so that the application appears in the Task Manager and is visible to Process Explorer. A: I'm not sure if any of this is easy and I would have to read up on the undocumented parts to find out, but here is what you want to do: Write a program to load a dll (yourself) into your own process Have your program make it so that when it loads, the cache (all/under one process) gets filled with your dll. The easiest way to do this in the case of a.exe (yourself) is to have your program create a new process, run through the steps in the links above to make the process show up in the Task Manager and Process Explorer, then delete the cache and reboot (filling the cache with your dll again) This requires Administrator priviledges As far as I know, this does not let you see any information about system processes so you are basically limited to what you can read from the file system directly. A: There is nothing in the sys files that should be easy for you to extract. The sys files are only read while in debug mode.
